

Subscription Renewal Tracker

Professional Case Study: Automated Workflow Solution

Overview

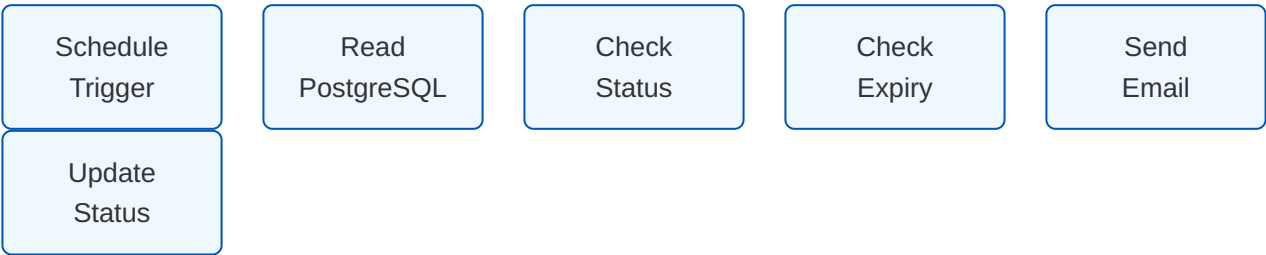

This automated workflow, built with n8n, monitors customer subscriptions stored in a PostgreSQL database [cite: 0]. It runs every minute, identifies subscriptions expiring within three days, sends automated renewal reminders via SMTP, and updates the database to prevent duplicate notifications [cite: 0].

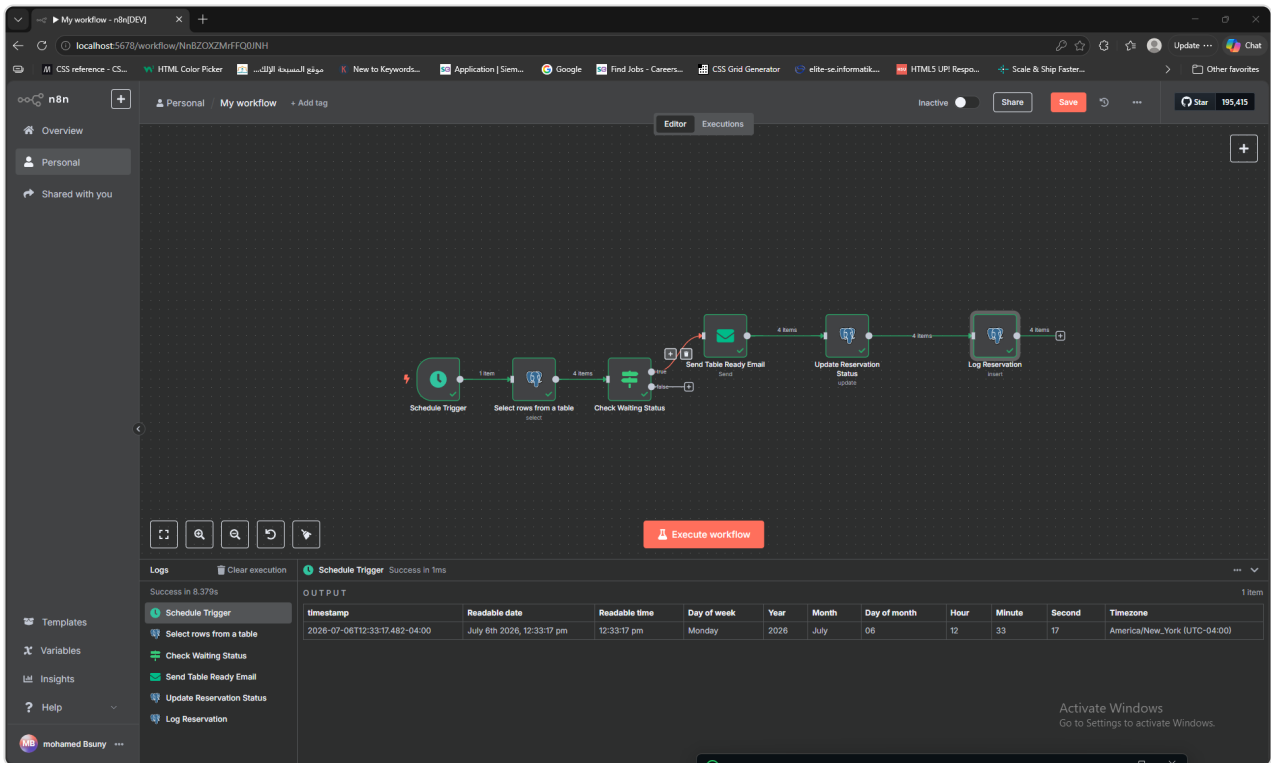

Business Problem & Solution

Business Problem: Businesses frequently experience lost recurring revenue when customers forget to renew subscriptions, and staff time is wasted by manually sending reminders [cite: 0].

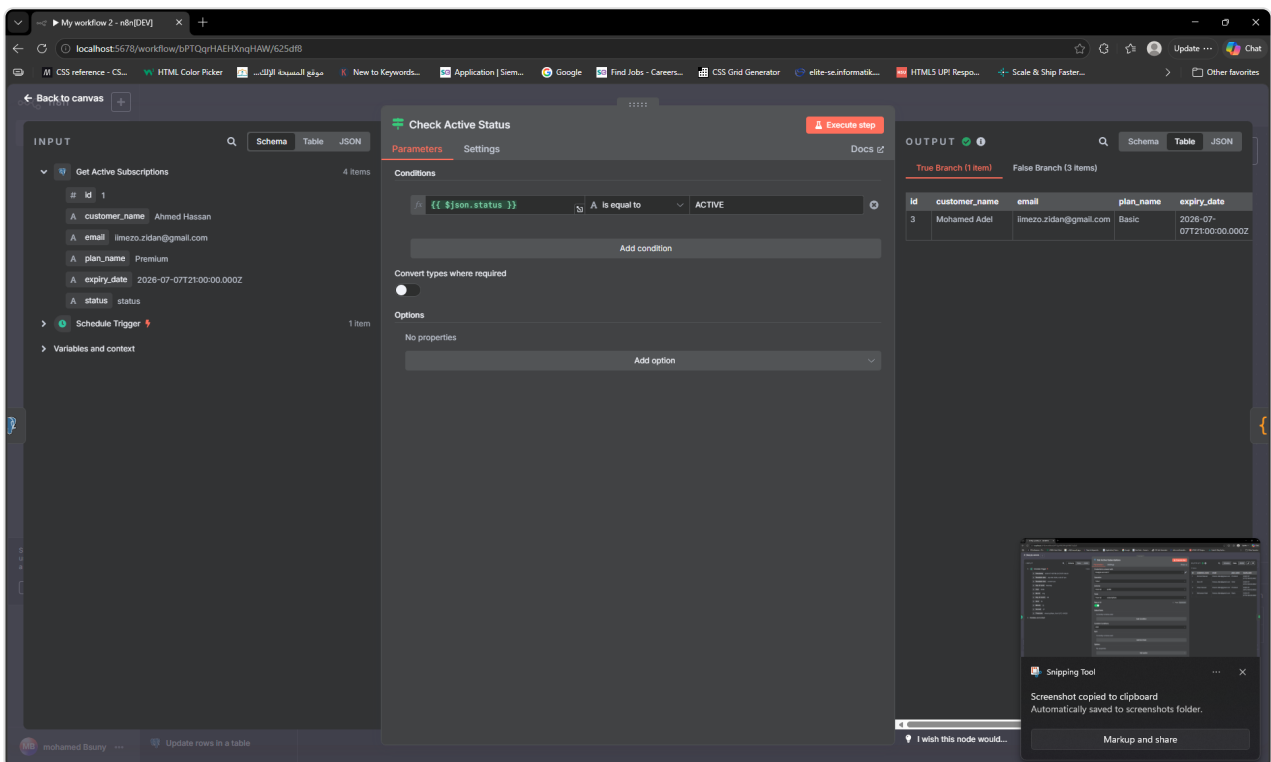

Solution: An automated, continuous monitoring system that notifies customers automatically before their subscription expires [cite: 0].
